N-TYPE MATERIAL

MonoX™ NeON uses n-type cells, boasting higher mobility of electric charge, resulting in higher generation efficiency.

NEAR ZERO LID (LIGHT INDUCED DEGRADATION)

The n-type cells used in Mono™ NeON have almost no boron, which may cause the initial efficiency to drop, leading to less LID.

NANO LEVEL CONTROL

MonoX™ NeON uses the Nano-level process control predominant in semiconductor processing process, which ensures less electric loss from internal defects.

DOUBLE SIDED CELL STRUCTURE

The rear of the cell used in MonoX™ NeON is designed to contribute to generation; the light beam reflected from the rear of the module is reabsorbed to generate a great amount of additional power.

16.8kg Light Weight
Convenient Installation
EL Test
Current Sorting
25yrs Linear Warranty
-+3% Positive Power Tolerance

About LG Electronics

LG Electronics is a multinational corporation committed to expanding its capacity with solar energy business as its future growth engine. Our a solar energy source research program was launched in 1985, backed by LG Group's rich experience in semi-conductors, LCD, chemistry and electronic materials industry. We successfully released the first MonoX™ series to the market in 2010 which exported to 32 countries in 2 years. In 2013, MonoX™ NeON won "Intersolar Award", which proved its leading innovation in the industry.
